

## Adding liquidity via PancakeSwap

First of all, we assume that you are familiar with the use of PancakeSwap.

If you want to generate even more income from your POPE, you can do so by adding liquidity to the pool by going to this link :

<https://exchange.pancakeswap.finance/#/add/0x55d398326f99059f775485246999027B3197955/0x82E684d9E0A2892E7d2ada8C8e1DCdC33eE4b645>

Then, you just have to add first your token that you want to collateralize (it can be USDT as well as any other token) and second your pope.

That's it! You will generate income according to your contribution to the liquidity pool as with any other token!
